AquaLux
BOAT DRAINAGE SYSTEM

Born out of a collaborative effort between GEM Products and one of our boat-building partners, this piece was designed with the serious boater in mind. Engineered to mount flush with the hull minimizing drag, and in turn, reducing prop slippage.

- NPT threading on piece to be used with a ball valve
- Body designed to be integrated into the boat hull for maximum strength
- Flush to the boat hull to minimize drag
- Intake holes engineered at 20° for optimal water intake
